

SilverPepper Commodity Strategies Global Macro Fund
Advisor Class Shares (SPCAX)
Institutional Class Shares (SPCIX)

Summary Prospectus

November 1, 2022

Before you invest, you may want to review the Fund's prospectus, which contains more information about the Fund and its risks. You can find the Fund's Statutory Prospectus and Statement of Additional Information and other information about the Fund online at www.silverpepperfunds.com/invest-now/. You may also obtain this information at no cost by calling 1-855-554-5540 or by sending an e-mail request to SilverPepperfunds@umb.com. The Fund's Prospectus and Statement of Additional Information, both dated November 1, 2022, as each may be amended or supplemented, are incorporated by reference into this Summary Prospectus.

Investment Objectives

The primary investment objective of the SilverPepper Commodity Strategies Global Macro Fund (the "Fund" or "Commodity Strategies Global Macro Fund") is to seek returns that are largely uncorrelated with the returns of the general stock and bond markets. The Commodity Strategies Global Macro Fund also seeks capital appreciation.

Fees and Expenses of the Fund

This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Commodity Strategies Global Macro Fund. You may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table and example below.

	Advisor Class Shares	Institutional Class Shares
Shareholder Fees <i>(fees paid directly from your investment)</i>		
Maximum sales charge (load) imposed on purchases	None	None
Maximum deferred sales charge (load)	None	None
Wire fee	\$20	\$20
Overnight check delivery fee	\$25	\$25
Retirement account fees (annual maintenance fee)	\$15	\$15
Annual Fund Operating Expenses <i>(expenses that you pay each year as a percentage of the value of your investment)</i>		
Management fees	1.50%	1.50%
Distribution and/or service (12b-1) fees	None	None
Other expenses	0.49%	0.49%
Shareholder servicing fee	0.16%	None
Subsidiary expenses ¹	0.02%	0.02%
All other expenses (includes Dividend & Interest expenses of 0.08%)	0.31%	0.47%
Total annual fund operating expenses	1.99%	1.99%
Fee waived and/or expenses reimbursed²	(0.00)%	0.03%
Total annual fund operating expenses (after waiving fees and/or reimbursing expenses)²	1.99%	2.02%

- Subsidiary expenses are borne by the Commodity Strategies Global Macro Fund as a result of the Fund investing through the Subsidiary.
- The Advisor has contractually agreed to waive its fees and/or pay for operating expenses of the Commodity Strategies Global Macro Fund to ensure that total annual fund operating expenses (excluding any taxes, leverage interest, brokerage commissions, dividend and interest expenses on short sales acquired fund fees and expenses (as determined in accordance with Form N-1A), expenses incurred in connection with any merger or reorganization, and extraordinary expenses such as litigation expenses) do not exceed 2.24% and 1.99% of the average daily net assets of the Commodity Strategies Global Macro Fund's Advisor Class and Institutional Class shares, respectively.

This agreement is in effect until October 31, 2032, and it may be terminated or amended prior to the end of the term with the approval of the Trust's Board of Trustees. The Advisor is permitted to seek reimbursement from the Commodity Strategies Global Macro Fund, subject to certain limitations, of fees waived or payments made to the Commodity Strategies Global Macro Fund for a period ending three full fiscal years after the date of the waiver or payment. This reimbursement may be requested from the Fund if the reimbursement will not cause the Fund's annual expense ratio to exceed the lesser of (a) the expense limitation in effect at the time such fees were waived or payments made, or (b) the expense limitation in effect at the time of the reimbursement.

Example

This example is intended to help you compare the cost of investing in the Commodity Strategies Global Macro Fund with the cost of investing in other mutual funds.

The example assumes that you invest \$10,000 in the Commodity Strategies Global Macro Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Commodity Strategies Global Macro Fund's operating expenses remain the same. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

	One Year	Three Years	Five Years	Ten Years
Advisor Class shares	\$202	\$624	\$1,073	\$2,317
Institutional Class shares	\$205	\$634	\$1,088	\$2,348

Portfolio Turnover

The Commodity Strategies Global Macro Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover may indicate higher transaction costs and may result in higher taxes when Commodity Strategies Global Macro Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Commodity Strategies Global Macro Fund's performance. During the most recent fiscal year, the Fund's portfolio turnover rate was 0% of the average value of its portfolio.

Principal Investment Strategies

Global Macro is an investment strategy that is defined by its freedom to trade both long and short positions in an array of asset classes and investment instruments located anywhere in the world. The Commodity Strategies Global Macro Fund intends to take full advantage of its investment freedom, but plans to do so based primarily on its Sub-Advisor's views of commodity prices.

The Advisor and Sub-Advisor (as defined herein) believe that the Commodity Strategies Global Macro Fund is distinguished from other global macro funds by its focus on commodities and the impact that commodity fundamentals (the factors that impact the supply and demand of commodities) have on commodity prices as well as the prices of other asset classes. Regardless of whether the Commodity Strategies Global Macro Fund owns a stock, bond, commodity or currency, the reason for holding that asset will typically be influenced, in some way or another, by the Sub-Advisor's views of commodity prices and how commodity prices influence other asset prices. Under normal market conditions, the Fund expects to primarily invest in securities and instruments that provide investment exposure to a variety of countries and regions throughout the world, including both developed and emerging markets. The Fund further expects, under normal circumstances, to provide investment exposure to at least three different countries other than the United States. To satisfy its country exposure, the Fund may invest in foreign currencies, sovereign debt, foreign equities and futures contracts that are linked to the performance of commodities, as the commodities underlying the futures contracts in which the Fund invests are produced and consumed throughout the world. Adverse economic, social, political or environmental conditions may affect the production and/or consumption of certain commodities in different countries or regions and, therefore, may have a significant effect on the overall value of such commodities. To the extent the Fund engages in derivative transactions, it may be required to cover its obligations under those transactions. As a result, the Fund expects that it may hold a significant portion of its assets in U.S. Government securities, short-term debt securities, money market instruments, cash and other cash equivalents to collateralize its derivative transactions.

The day-to-day management of the Commodity Strategies Global Macro Fund is conducted by Galtere Inc. ("Galtere" or the "Sub-Advisor"), which specializes in managing commodity-based global macro investment strategies. To implement the investment strategy for the Commodity Strategies Global Macro Fund, Galtere draws on its experience and expertise in commodity markets to identify market drivers, or trends, which may create favorable investment opportunities for the Commodity Strategies Global Macro Fund. This analysis includes consideration of factors such as geopolitical movements, economic cycles, international production and consumption patterns, demographics, and weather patterns. From this global snapshot, three to five investment themes are typically developed, across which capital is allocated at

the Sub-Advisor's discretion. While these themes are typically long-term, they undergo regular reevaluation. As long as Galtere's fundamental research continues to support the underlying hypotheses of a theme, the theme may continue to be a driver of specific investments within the Commodity Strategies Global Macro Fund.

To implement specific investments and profile specific long or short trades, all asset classes, such as common stocks, bonds, commodities, and currencies, are considered. Bottom-up fundamental analysis is used to profile the trades. Once the specific investment instrument is chosen that best articulates the theme, then Galtere's proprietary price-analysis model is used to identify what it believes will be the most advantageous entry and exit prices for that investment. Generally, a combination of long and/or short positions are used to express each theme. Bonds in which the Fund invests will generally be investment grade, of any maturity, and may include, but are not limited to, those of U.S. Government, sovereign and corporate issuers. Investment grade securities are those rated at the time of acquisition Baa3 or higher by Moody's Investors Service, Inc. ("Moody's"), or BBB- or higher by Standard & Poor's, a division of McGraw Hill Companies Inc. ("S&P"), or Fitch Ratings Ltd. ("Fitch") or, if unrated by S&P, Moody's or Fitch, determined by the Fund's Sub-Advisor to be of comparable credit quality.

The investment approach also places a strong emphasis on risk management. Galtere uses future and options contracts for risk management in an attempt to reduce position-specific risk or volatility. Galtere's process uses a variety of hedging and other investment techniques that seek to protect capital and attempt to reduce the frequency and severity of loss.

As part of pursuing its investment strategy, the Commodity Strategies Global Macro Fund will invest up to 25% of its total assets in a wholly-owned and controlled subsidiary formed under the laws of the Cayman Islands (the "Subsidiary"). The Subsidiary is advised by the Fund's Advisor and has the same investment objective as the Commodity Strategies Global Macro Fund. The Subsidiary will generally invest in derivatives, including commodity futures, options on commodity futures, or other investments intended to serve as margin or collateral for derivative positions.

The instruments in which the Commodity Strategies Global Macro Fund invests may have payments linked to the performance of commodities. Although the Commodity Strategies Global Macro Fund expects to make these investments principally by investing in the Subsidiary, the Commodity Strategies Global Macro Fund also may invest directly in the same instruments to the extent permitted under the 1940 Act and consistent with its intent to be treated as a "regulated investment company" under the Internal Revenue Code of 1986, as amended (the "Code"). References in this Prospectus to investments by, and activities and risks of, the Commodity Strategies Global Macro Fund may also include investments by, and activities and risks of, the Subsidiary.

Principal Risks of Investing

Risk is inherent in all investing and you could lose money by investing in the Fund. A summary description of certain principal risks of investing in the Commodity Strategies Global Macro Fund is set forth below. Because the Commodity Strategies Global Macro Fund may be considered to be investing indirectly through its Subsidiary, references to the Commodity Strategies Global Macro Fund's risks also include risks associated with investing in the Subsidiary. Before you decide whether to invest in the Commodity Strategies Global Macro Fund, carefully consider these risk factors associated with investing in the Commodity Strategies Global Macro Fund, which may cause investors to lose money. There can be no assurance that the Commodity Strategies Global Macro Fund will achieve its investment objectives.

Market Risk. The market price of a security or instrument may decline, sometimes rapidly or unpredictably, due to general market conditions that are not specifically related to a particular company, such as real or perceived adverse economic or political conditions throughout the world, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. In addition, local, regional or global events such as war, acts of terrorism, the spread of infectious illness or other public health issues, or other events could have significant impact on a security or instrument. The market value of a security or instrument also may decline because of factors that affect a particular industry or industries, such as labor shortages or increased production costs and competitive conditions within an industry.

Futures Strategy/Commodities Risk. Exposure to the commodities markets (including financial futures markets) through investments in futures may subject the Commodity Strategies Global Macro Fund to greater volatility than cash market investments in securities. Prices of commodities and related contracts may fluctuate significantly and unpredictably over short periods for a variety of reasons, including physical storage risks, changes in interest rates, overall market movements, supply and demand relationships and balances of payments and trade; weather and natural disasters; and governmental, agricultural, trade, fiscal, monetary and exchange control programs and policies. The commodity markets are subject to temporary distortions and other disruptions. U.S. futures exchanges and some foreign exchanges have regulations that limit the amount of fluctuation in futures contract prices which may occur during a single business day and the size of contract

positions taken. Limit prices have the effect of precluding trading in a particular contract or forcing the liquidation of contracts at disadvantageous times or prices.

Emerging Markets Risk. Many of the risks with respect to foreign investments are more pronounced for investments in issuers in developing or emerging market countries. Emerging market countries tend to have more government exchange controls, more volatile interest and currency exchange rates, less market regulation, and less developed and less stable economic, political and legal systems than those of more developed countries. There may be less publicly available and reliable information about issuers in emerging markets than is available about issuers in more developed markets. In addition, emerging market countries may experience high levels of inflation and may have less liquid securities markets and less efficient trading and settlement systems.

Derivatives Risk. Derivatives include instruments and contracts that are based on and valued in relation to one or more underlying securities, financial benchmarks, indices, or other reference obligations or measures of value. Major types of derivatives include futures, options, swaps and forward contracts. Using derivatives exposes the Fund to additional or heightened risks, including leverage risk, liquidity risk, valuation risk, market risk, counterparty risk, and credit risk. Derivatives transactions can be highly illiquid and difficult to unwind or value, they can increase Fund volatility, and changes in the value of a derivative held by the Commodity Strategies Global Macro Fund may not correlate with the value of the underlying instrument or the Commodity Strategies Global Macro Fund's other investments. Many of the risks applicable to trading the instruments underlying derivatives are also applicable to derivatives trading. However, derivatives are subject to additional risks such as operational risk, including settlement issues, and legal risk, including that underlying documentation is incomplete or ambiguous. For derivatives that are required to be cleared by a regulated clearinghouse, other risks may arise from the Fund's relationship with a brokerage firm through which it submits derivatives trades for clearing, including in some cases from other clearing customers of the brokerage firm.

Options Risk. Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary investment risks. The Commodity Strategies Global Macro Fund may not fully benefit from or may lose money on an option if changes in its value do not correspond as anticipated to changes in the value of the underlying securities. If the Commodity Strategies Global Macro Fund is not able to sell an option held in its portfolio, it would have to exercise the option to realize any profit and would incur transaction costs upon the purchase or sale of the underlying securities. Ownership of options involves the payment of premiums, which may adversely affect the Commodity Strategies Global Macro Fund's performance. To the extent that the Commodity Strategies Global Macro Fund invests in over-the-counter options, the Commodity Strategies Global Macro Fund may be exposed to counterparty risk.

Currency Risk. The values of investments in securities denominated in foreign currencies increase or decrease as the rates of exchange between those currencies and the U.S. dollar change. Currency conversion costs and currency fluctuations could erase investment gains or add to investment losses. Currency exchange rates can be volatile and are affected by factors such as general economic conditions, the actions of the U.S. and foreign governments or central banks, the imposition of currency controls, and speculation.

Lack of Correlation Risk; Hedging Risk. There can be no assurance that the Fund's hedges will be effective. Any decrease in negative correlation or increase in positive correlation between the positions the Sub-Advisor anticipated would be offsetting (such as short and long positions in securities or currencies held by the Fund) could result in significant losses for the Fund.

Credit Risk. If an issuer or guarantor of a debt security held by the Commodity Strategies Global Macro Fund or a counterparty to a financial contract with the Commodity Strategies Global Macro Fund defaults or is downgraded or is perceived to be less creditworthy, or if the value of the assets underlying a security declines, the value of the Commodity Strategies Global Macro Fund's portfolio will typically decline.

Foreign Sovereign Risk. Foreign governments rely on taxes and other revenue sources to pay interest and principal on their debt obligations. The payment of principal and interest on these obligations may be adversely affected by a variety of factors, including economic results within the foreign country, changes in interest and exchange rates, changes in debt ratings, changing political sentiments, legislation, policy changes, a limited tax base or limited revenue sources, natural disasters, or other economic or credit problems.

Small-Cap and Mid-Cap Company Risk. The securities of small-capitalization and mid-capitalization companies may be subject to more abrupt or erratic market movements and may have lower trading volumes or more erratic

trading than securities of larger, more established companies or market averages in general. In addition, such companies typically are more likely to be adversely affected than large capitalization companies by changes in earning results, business prospects, investor expectations or poor economic or market conditions.

Fixed Income Securities Risk. The prices of fixed income securities respond to economic developments, particularly interest rate changes, as well as to changes in an issuer's credit rating or market perceptions about the creditworthiness of an issuer. Generally, fixed income securities decrease in value if interest rates rise and increase in value if interest rates fall, and longer term and lower rated securities are more volatile than shorter-term and higher rated securities.

Government-Sponsored Entities Risk. The Fund's investment in U.S. government obligations may include securities issued or guaranteed as to principal and interest by the U.S. government, or its agencies or instrumentalities. There can be no assurance that the U.S. government would provide financial support to its agencies or instrumentalities (including government-sponsored enterprises) when it is not obligated to do so.

Short Sales Risk. In connection with a short sale of a security or other instrument, the Commodity Strategies Global Macro Fund is subject to the risk that instead of declining, the price of the security or other instrument sold short will rise. If the price of the security or other instrument sold short increases between the date of the short sale and the date on which the Commodity Strategies Global Macro Fund replaces the security or other instrument borrowed to make the short sale, the Commodity Strategies Global Macro Fund will experience a loss, which is theoretically unlimited since there is a theoretically unlimited potential for the market price of a security or other instrument sold short to increase. Shorting options or futures may have an imperfect correlation to the assets held by the Fund and may not adequately protect against losses in or may result in greater losses for the Fund's portfolio.

Asset Coverage Risk. As a series of an investment company registered with the SEC, the Commodity Strategies Global Macro Fund must engage in certain measures to "cover" open positions with respect to certain kinds of derivatives and short sales. The Commodity Strategies Global Macro Fund may incur losses on derivatives and other leveraged investments (including the entire amount of the Commodity Strategies Global Macro Fund's investment in such investments) even if they are covered. The Fund, at its discretion, may forgo asset coverage in favor of implementing the SEC's new and more comprehensive requirements under Rule 18f-4 of the 1940 Act, including value-at-risk ("VaR") limitations on the Fund's leverage risk.

Subsidiary Risk. By investing in the Subsidiary, the Commodity Strategies Global Macro Fund will be indirectly exposed to the risks associated with the Subsidiary's investments. The Subsidiary is not registered under the 1940 Act and, unless otherwise noted in this Prospectus, is not itself subject to all of the investor protections of the 1940 Act. Changes in the laws of the United States, the U.S. states or the Cayman Islands, under which the Fund and Subsidiary are organized and operated, as applicable, could prevent the Commodity Strategies Global Macro Fund or the Subsidiary from operating as described in this Prospectus and could negatively affect the Commodity Strategies Global Macro Fund and its shareholders.

Tax Risk. To qualify for the tax treatment available to regulated investment companies under the Code, the Commodity Strategies Global Macro Fund must derive at least 90% of its gross income for each taxable year from sources treated as "qualifying income." Income derived from direct investments in commodities is not "qualifying income." In addition, the Internal Revenue Service (the "IRS") has issued a revenue ruling concluding that income and gains from certain commodity-linked derivatives does not constitute "qualifying income." Investment through the Subsidiary is expected to allow the Commodity Strategies Global Macro Fund to gain exposure to the commodity markets within the limitations of the federal tax law requirements applicable to regulated investment companies.

The tax treatment of the Fund's investment in commodity interests or in the Subsidiary could nevertheless be adversely affected by future legislation or Treasury regulations.

Leveraging Risk. Certain transactions the Commodity Strategies Global Macro Fund and/or the Subsidiary may undertake, such as entering into futures contracts, options, and short sales, may give rise to a form of leverage. Leverage can magnify the effects of changes in the value of the Commodity Strategies Global Macro Fund's investments and make the Commodity Strategies Global Macro Fund more volatile. Leverage creates a risk of loss of value on a larger pool of assets than the Commodity Strategies Global Macro Fund would otherwise have, potentially resulting in the loss of all assets. The Commodity Strategies Global Macro Fund may also have to sell assets at inopportune times to satisfy its obligations in connection with such transactions.

Portfolio Turnover Risk. Active and frequent trading of the Fund's portfolio securities may lead to higher transaction costs and may result in a greater number of taxable transactions than would otherwise be the case, which could negatively affect the Fund's performance. A high rate of portfolio turnover is 100% or more.

Equity Risk. The value of the equity securities held by the Commodity Strategies Global Macro Fund may fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities held by the Commodity Strategies Global Macro Fund participate, or factors relating to specific companies in which the Commodity Strategies Global Macro Fund invests.

Management and Strategy Risk. The value of your investment depends on the judgment of the Sub-Advisor about the quality, relative yield, value or market trends affecting a particular security, industry, sector or region, which may prove to be incorrect.

ETF and Mutual Fund Risk. Investing in ETFs or mutual funds (including other funds managed by the Fund's advisor) will provide the fund with exposure to the risks of owning the underlying securities the ETFs or mutual funds hold. Shares of ETFs typically trade on securities exchanges and may at times trade at a premium or discount to their net asset values. In addition, an ETF or a mutual fund, if the mutual fund is an index fund, may not replicate exactly the performance of the benchmark index it seeks to track for a number of reasons, including transaction costs incurred by the ETF or mutual fund, the temporary unavailability of certain index securities in the secondary market, or discrepancies between the ETF or mutual fund and the index with respect to the weighting of securities or the number of securities held. It may be more expensive for the Fund to invest in an ETF or mutual fund than to own the portfolio securities of these investment vehicles directly. Investing in ETFs and mutual funds, which are investment companies, involves duplication of advisory fees and certain other expenses. The Fund will pay brokerage commissions in connection with the purchase and sale of shares of ETFs. In addition, the Fund may invest in underlying funds which invest a larger portion of their assets in one or more sectors than many other mutual funds, and thus will be more susceptible to negative events affecting those sectors.

Liquidity Risk. The Commodity Strategies Global Macro Fund may not be able to sell some or all of the investments that it holds due to a lack of demand in the marketplace or other factors such as market turmoil. If the Commodity Strategies Global Macro Fund is forced to sell an illiquid asset to meet redemption requests or other cash needs it may only be able to sell those investments at a loss. In addition, the reduction in dealer market-making capacity in the fixed income markets that has occurred in recent years has the potential to decrease the liquidity of the Fund's investments. Illiquid assets may also be difficult to value.

Valuation Risk. The sales price the Commodity Strategies Global Macro Fund could receive for any particular portfolio investment may differ from the Fund's valuation of the investment, particularly for securities that trade in thin or volatile markets or that are valued by the Fund using a fair value methodology. Investors who purchase or redeem Commodity Strategies Global Macro Fund shares on days when the Fund is holding fair-valued securities may receive fewer or more shares or lower or higher redemption proceeds than they would have received if the Fund had not fair-valued the security or had used a different valuation methodology.

LIBOR Risk. Many financial instruments, financings or other transactions to which the Fund may be a party use or may use a floating rate based on the London Interbank Offered Rate ("LIBOR"). In July 2017, the Financial Conduct Authority, the United Kingdom's financial regulatory body, announced that after 2021 it would cease its active encouragement of banks to provide the quotations needed to sustain LIBOR. The publication of LIBOR on a representative basis ceased for the one-week and two-month U.S. dollar LIBOR settings immediately after December 31, 2021, and it is expected to cease for the remaining U.S. dollar LIBOR settings immediately after June 30, 2023. Any potential effects of the transition away from LIBOR on the Fund or on certain instruments in which the Fund invests can be difficult to determine, and they may vary depending on factors that include, but are not limited to, (i) existing fallback or termination provisions in individual contracts and (ii) whether, how, and when industry participants develop and adopt new reference rates and fallbacks for both legacy and new products and instruments. The transition process may involve, among other things, increased volatility or illiquidity in markets for instruments that currently rely on LIBOR, and there may be a reduction in the value of certain instruments held by the Fund.

COVID-19 Related Market Events. The pandemic of the novel coronavirus respiratory disease designated COVID-19 has resulted in extreme volatility in the financial markets, a domestic and global economic downturn, severe losses, particularly to some sectors of the economy and individual issuers, and reduced liquidity of many

instruments. There have also been significant disruptions to business operations, including business closures; strained healthcare systems; disruptions to supply chains and employee availability; large fluctuations in consumer demand; and widespread uncertainty regarding the duration and long-term effects of the pandemic. The pandemic may result in domestic and foreign political and social instability, damage to diplomatic and international trade relations, and continued volatility and/or decreased liquidity in the securities markets. Governments and central banks, including the Federal Reserve in the United States, took extraordinary and unprecedented actions to support local and global economies and the financial markets. This and other government intervention into the economy and financial markets to address the pandemic may not work as intended, particularly if the efforts are perceived by investors as being unlikely to achieve the desired results. Rates of inflation have also recently risen, which could adversely affect economies and markets. In addition, the COVID-19 pandemic, and measures taken to mitigate its effects, could result in disruptions to the services provided to the Fund by its service providers. Other market events like the COVID-19 pandemic may cause similar disruptions and effects.

Cybersecurity Risk. Cybersecurity incidents may allow an unauthorized party to gain access to Fund assets, customer data (including private shareholder information), or proprietary information, or cause the Fund, the Advisor, the Sub-Advisor and/or other service providers (including custodians, sub-custodians, transfer agents and financial intermediaries) to suffer data breaches, data corruption or loss of operational functionality. In an extreme case, a shareholder’s ability to exchange or redeem Fund shares may be affected. Issuers or securities in which the Fund invests are also subject to cybersecurity risks, and the value of those securities could decline if the issuers experience cybersecurity incidents.

Performance

The bar chart and table below provide some indication of the risks of investing in the Fund by showing changes in the Fund’s performance from year to year for Institutional Class shares and by showing how the average annual total returns of each class of the Fund compare with the average annual total returns of a broad-based market index. Performance for classes other than those shown may vary from the performance shown to the extent the expenses for those classes differ. Updated performance information is available at the Fund’s website, www.silverpepperfunds.com, or by calling the Fund at 1-855-554-5540. The Fund’s past performance, before and after taxes, is not necessarily an indication of how the Fund will perform in the future.

For each calendar year at NAV

The year-to-date return as of September 30, 2022 was 6.72%.

Institutional Class		
Highest Calendar Quarter Return at NAV	14.02%	Quarter Ended 6/30/2021
Lowest Calendar Quarter Return at NAV	(14.44)%	Quarter Ended 3/31/2020

Average Annual Total Returns for Period Ended December 31, 2021	One Year	Five Years	Since Inception October 31, 2013
Institutional Class Return Before Taxes	22.50%	3.58%	1.06%
Institutional Class Return After Taxes on Distributions*	16.84%	2.16%	0.21%
Institutional Class Return After Taxes on Distributions and Sale of Fund Shares*	17.20%	2.53%	0.67%
Advisor Class Return Before Taxes	22.41%	3.59%	0.97%
Bloomberg Commodity Total Return Index (reflects no deduction for fees, expenses or taxes)	27.11%	3.66%	(2.11)%

* After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state and local taxes. Actual after-tax returns shown depend on an investor's tax situation and may differ from those shown. After-tax returns are not relevant to investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) plans or individual retirement accounts. After-tax returns are shown for Institutional Class shares only and after-tax returns for classes other than Institutional Class will vary from returns shown for Institutional Class shares.

Investment Advisor

SilverPepper LLC (the "Advisor") is the Commodity Strategies Global Macro Fund's investment advisor.

Sub-Advisor

Galtere Inc. is the Commodity Strategies Global Macro Fund's Sub-Advisor.

Portfolio Manager

Renee Haugerud has served as the Commodity Strategies Global Macro Fund's portfolio manager since its inception in October 2013.

Purchase and Sale of Fund Shares

The minimum initial investment for Advisor Class and Institutional Class shares is \$5,000. The minimum for subsequent investments is \$100.

Commodity Strategies Global Macro Fund shares are redeemable on any business day the New York Stock Exchange (the "NYSE") is open for business by written request or by telephone.

Tax Information

The Commodity Strategies Global Macro Fund's distributions are generally taxable, and will ordinarily be taxed as ordinary income, qualified dividend income or capital gains, unless you are investing through a tax-advantaged arrangement, such as a 401(k) plan or an individual retirement account. Shareholders investing through such tax-advantaged arrangements may be taxed later upon withdrawal of monies from those arrangements.

Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase shares of the Commodity Strategies Global Macro Fund through a broker-dealer or other financial intermediary (such as a bank), the Commodity Strategies Global Macro Fund and its related companies may pay the intermediary for the sale of Commodity Strategies Global Macro Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Commodity Strategies Global Macro Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.
